

## RV Winter Prep and Storage

### Protect Plumbing From Freezing

- Bypass water heater
- Drain and flush water heater
- Remove water filters if any
- Option 1 use air compressor to blow water out of water lines
- Option 2 use RV Antifreeze with water pump for each fixture
- Don't forget the low point drain or city water connection
- Use RV Antifreeze in sinks and all drain traps
- Fully empty all storage tanks
  - Black Tank
  - Fresh Water
  - Grey Tank
  - Galley Tank

### Check RV Weather Seals

- Inspect roof for any penetrations or cracks in caulk
- Inspect side walls
  - Check door and window sealant edge
  - Check seams and any penetration

### Tires Protected

- Tires inflated to Max Cold PSI
- Fully supported on flat surface
  - Option to elevate on rubber mat surface
- Lower RV Stabilizers.
- Cover tires

### Rodent Control

- Seal any hole or possible entrance with wire mesh and foam or caulking
- Use preferred deterrent (strobe light, Bounce Dryer Sheet, Ivory Soap)

### Battery maintenance storage options

- Use solar to keep batteries charged
- Plug in RV once every 3 weeks for a day to keep batteries topped off
- Pull batteries out to keep charged for convenience

### Fuel System

- Fuel stabilizer in fuel tank and engine
- Fuel stabilizer in generator

### Extra

- Check on it occasionally inside and out to head off any issues.
